Human Activity Recognition

Trystan Knowles

The Data

WISDM Lab at Fordham University

2 Devices, 2 Sensors

Collected from both gyroscopes and accelerometers in both smartwatches and smartphones
18 Different Activities, 51 Participants

Collected across all 4 sensors in sync

3 Minutes per Activity

54 minutes of data for all participants

Classification Model

It's Fast

Build your presentations in hours, not days

It's Better

Tell a visual story that connects with audiences

It's Beautiful

You will be amazed at what you can create

It's Fun

When was the last time you enjoyed making slides?
